Code Self-Portrait

Re-state the Assignment

Draw a self-portrait on paper using colored pencils. Then, recreate the self-portrait by utilizing various code tools on Processing.

Hand-drawn sketches

Reflections

Since it was my first time coding and using Processing, I did not know what was possible or easy to create with the software. I definitely had more ideas that I wanted to include in my final self-portrait when I was sketching it on paper, but they were beyond my capabilities at the moment. Some examples are creating curvy lines and drawing perfect hearts. I really enjoyed

creating the sketch and playing with colors. The most challenging part for me was drawing triangles and hearts.
